Ross Jaeger

This is Torvald. He is about to begin his workday as an Uber Driver and is saying goodbye to his wife and kids.

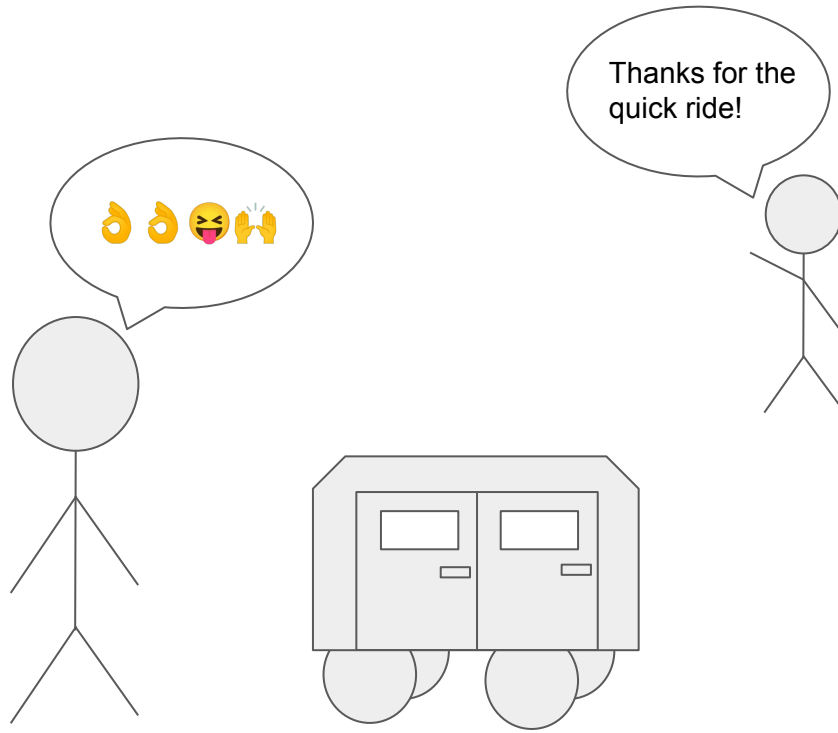

Torvald receives his first ride of the day and heads over to his car to go pick them up. He first thinks to check the TrainTracker app to see if any trains will get in the way of his route!

TrainTracker

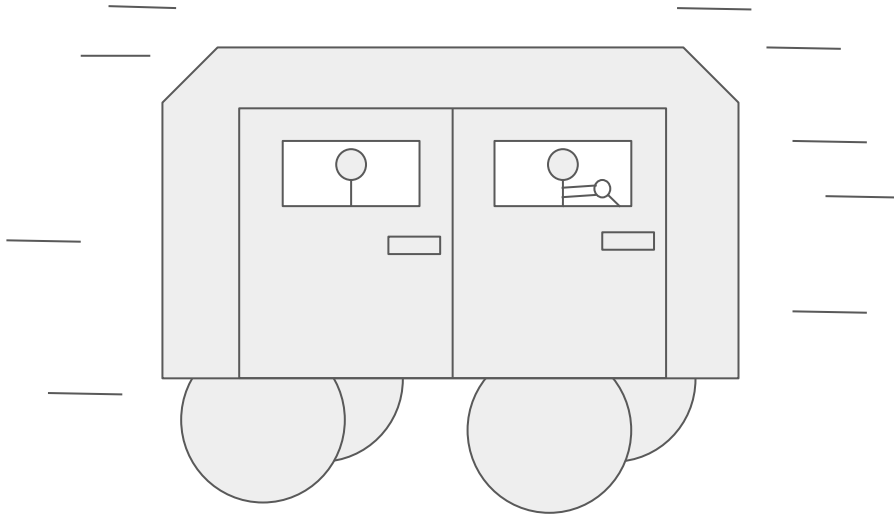

Trains on your route:

	Assembly St. 10:00AM
--	-------------------------

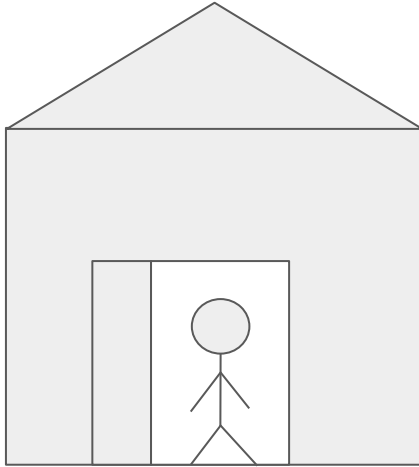

Torvald notices a train on his Uber route - this is an invaluable resource as it will allow him to plan ahead of time and take an alternate route so as to save time for both his rider(s) and himself!

Thanks to the TrainTracker app, Torvald saw that he would encounter a train if he took Uber's recommended route. As such, he used the alternate route provided to him by the TrainTracker app and was able to save a significant amount of time!

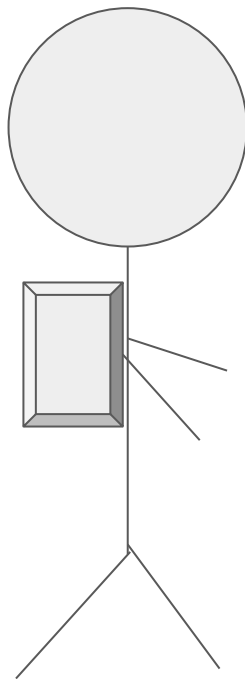

As Torvald takes on more rides, the time he saves with the TrainTracker app starts to add up as he has avoided several trains by this point in the day and he notices that he may be able to end his workday early as a result.

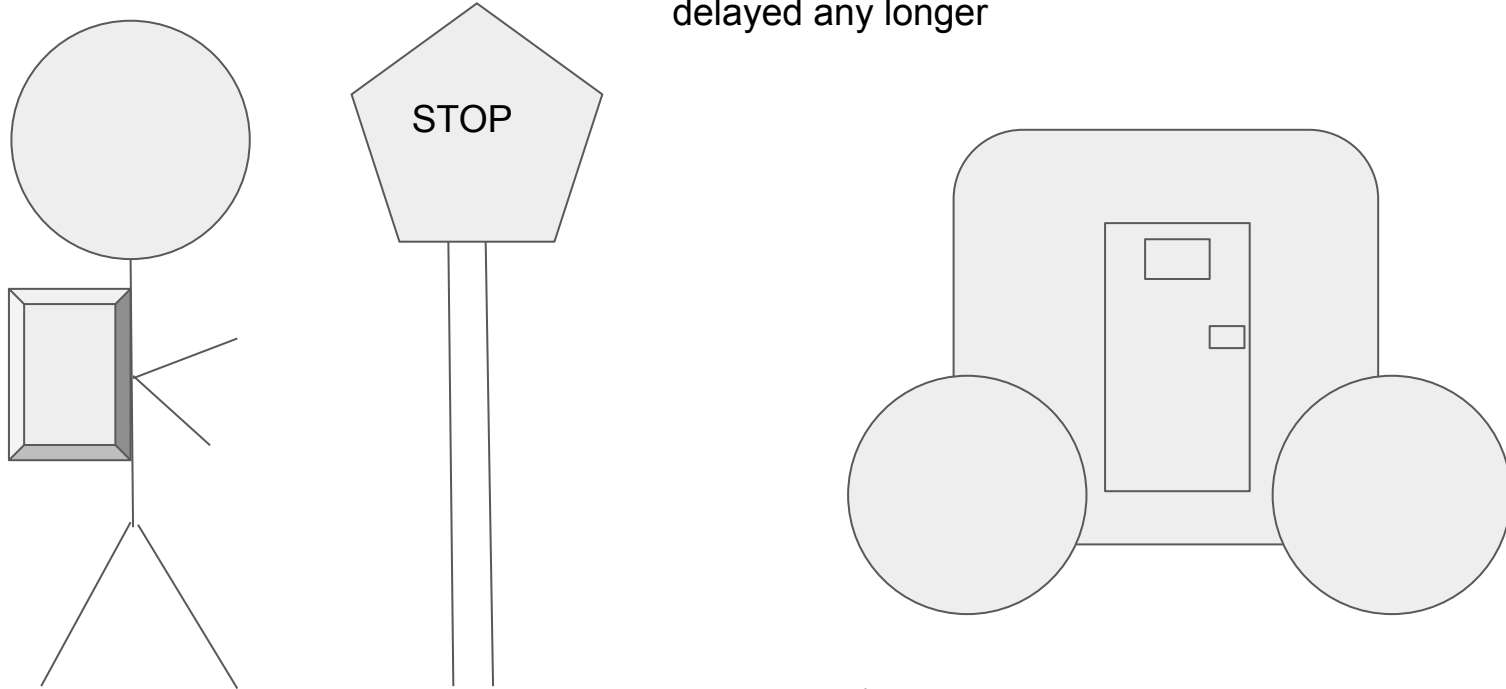

Home sweet home... Torvald did better than he thought he would as he was prepared for the obstacles of the day and decided to go home early as he had met his goal earlier than he had expected. He can't get over just how nice it was to have a day where his life was so optimized!

Ryan Wilhelm

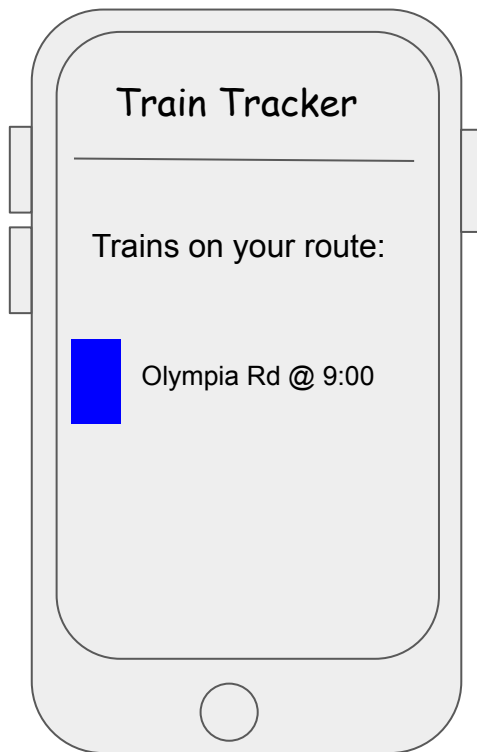

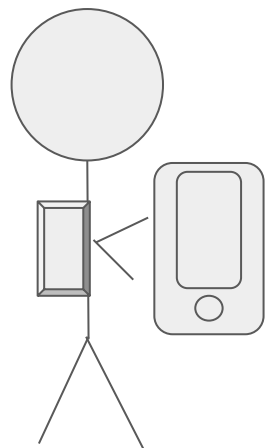

Hello meet dory and dory is a student at sick university and is walking to class through the city.

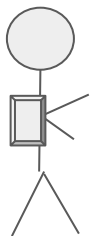

Dory had to stop at the sidewalk and couldn't cross the road because there was traffic so he is now late for class. He needs to make sure he doesn't get delayed any longer

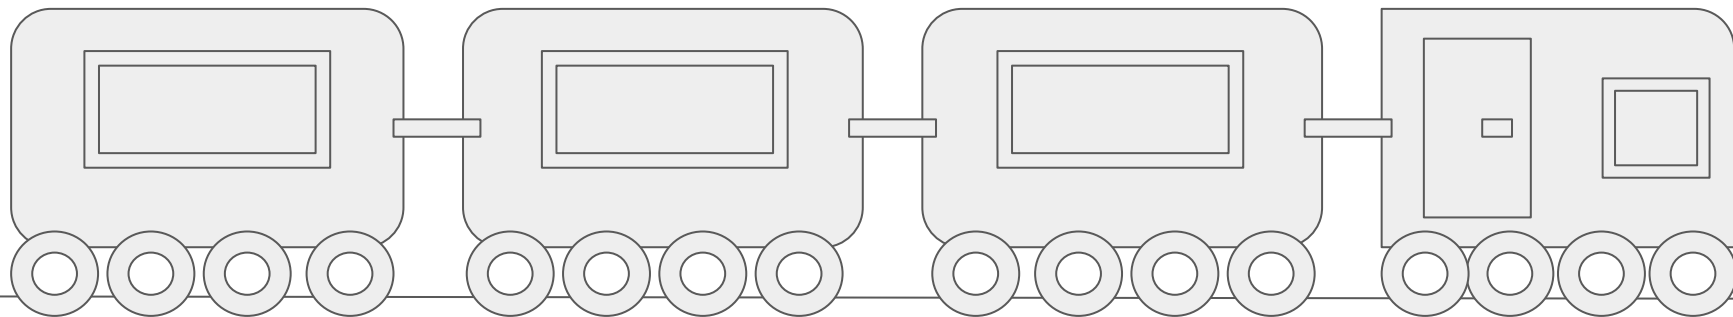

Dory wanted to make sure he wasn't going to run into any more obstacles so he checks the train tracker app and takes recommended route

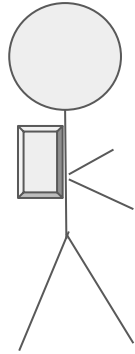

Dory decided to take the recommended route for getting to class using the train tracker app and if he didn't take the route he would have had to wait for the train to pass to go.

CLASS

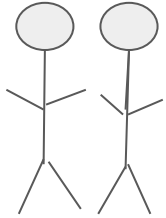

Dory makes it to class just in time so he won't lose any points for attendance and he also watched people in his class waiting for train

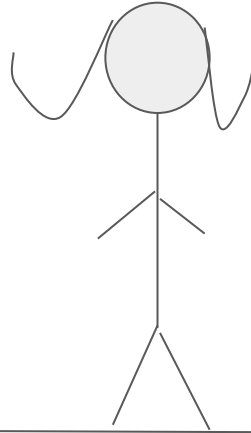

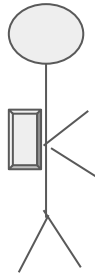

Class

Dory made it class and time and got
all of his points for attendance and his
classmates who did not use train
tracker didn't get there attendance

Barbra always tries to cook breakfast, get her kids ready for school, and drop them off at their bus stop. However, she has been late for work a lot due to trains coming in early in the morning

Barbra decides to install train trackers app so for the night before so she can be on time for work and still be able to do her daily morning routine.

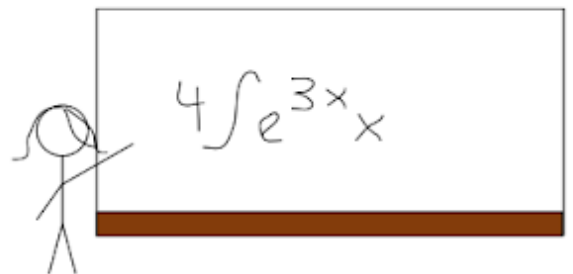

She types in where she wants to go, and the app finds the best routes for her

Then it shows her the alternate route in red, and saves the route for the next morning

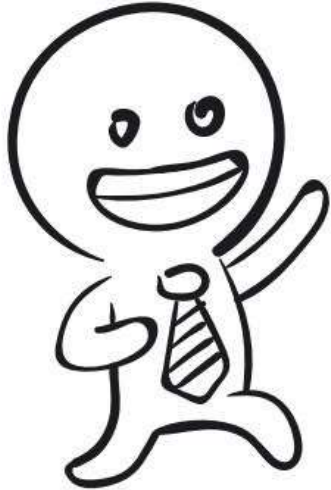

Barbra was able to drop off her kids with a lot of time to spare using route she saved.

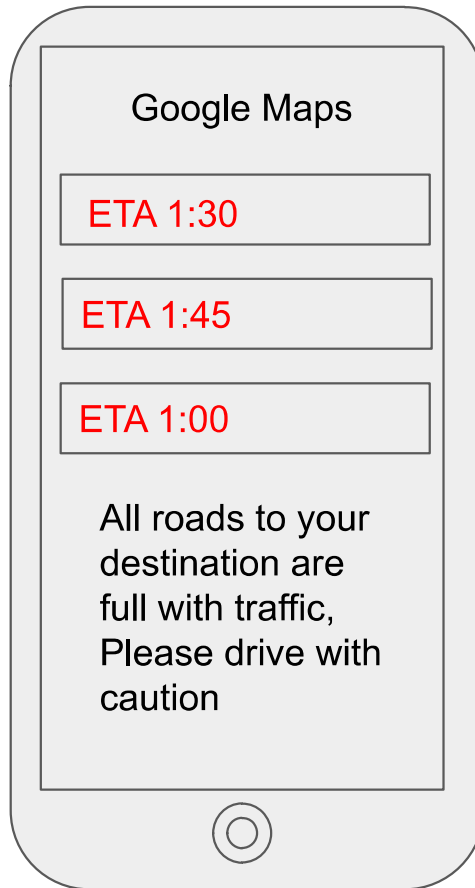

Barbra was on time for work and now gets to teach to her students calculus.

Marko is about to go to work to start his week on his workplace at Microsoft as a firewall programmer

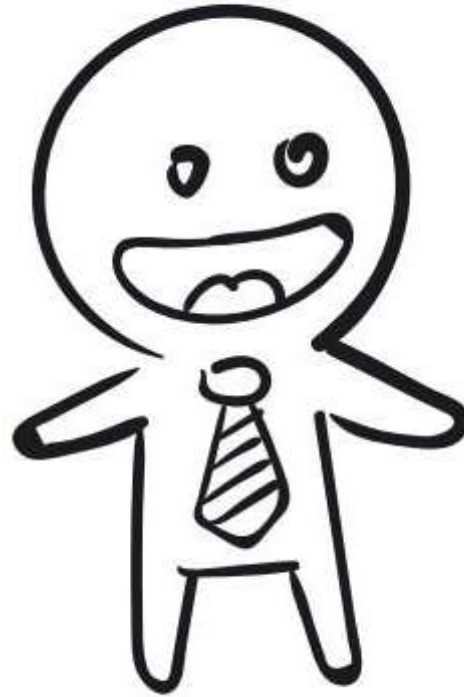

He start walking to his car..

Marko gets to his car and then he opens the google maps to see what's going on on the roads to see which route is better to go through and to his surprise he sees that all the roads are blocked because of traffic that caused by the trains.

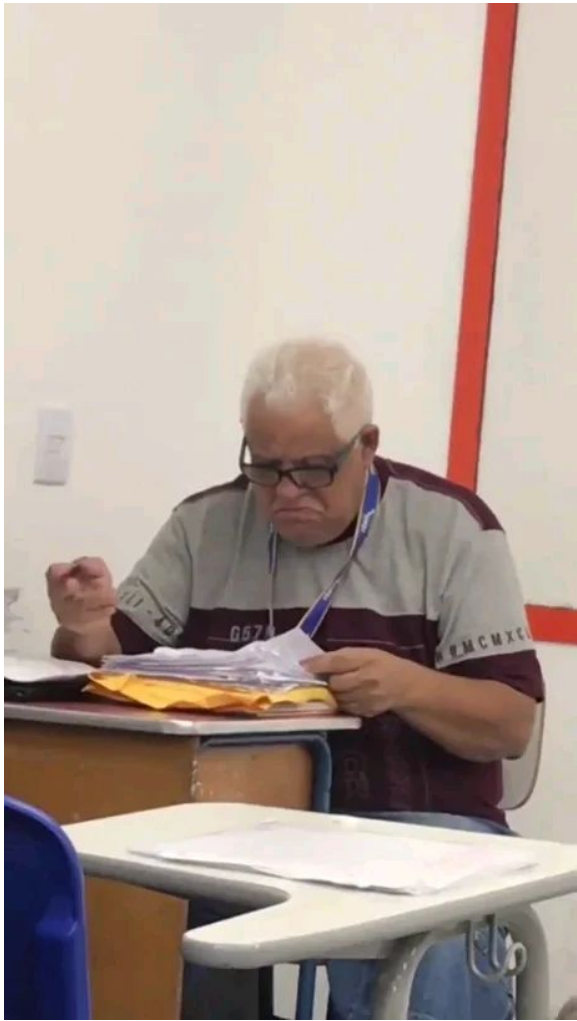

Marko was upset and angry because he didn't understand how is the ETA was so high because the drive to work takes him between 15 - 30 minutes.

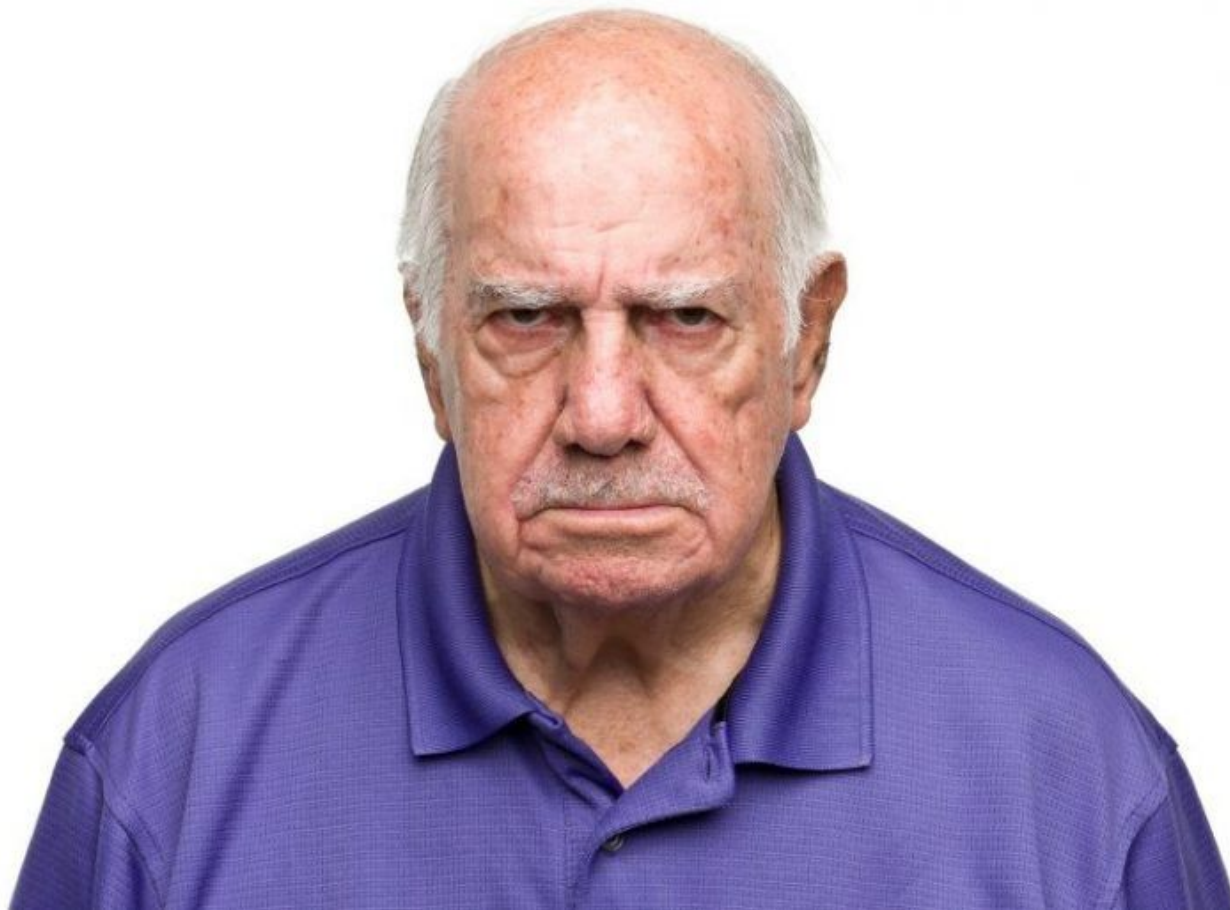

But Marko remembered that he has another application that can help him to get to work on time !

The **TrainTracker** application that shows him the fastest route to his destination where there is no train crossing and blocking the way.

Now Marko is happy that he could get to work on time.

Herbert spends a lot of his time grading papers on campus.

He wants complete silence while doing this, but the trains get very loud when they go by

He sets up his smartwatch to tell him when they come by

Now he knows when the trains come so he can put on headphones

Without the distractions he can get more work done

With more time to work he's graded all his papers and has more time to perfect his teaching
